Seventeen years have been spent in perfecting "Security" Check-Protector Fountain Pens. Features never before used in fountain pen construction are combined in these, the most perfectly made and faultless writing pens of today. They are new from end to end—the product of a group of craftsmen, who for a decade have studied the ways of fountain pens, discovering their common faults and devising means of correction; producing a fountain pen that in its newly patented features is a pronounced improvement over all others. In the Security Check-Protector Fountain Pen you have a writing instrument which does business at both ends. On the one end is a pen which glides over the paper spurring your thoughts on to greater activity, never interrupting with annoying scratches or blots. A real pen judged by every known requirement. The other end is a perfect check protector which safeguards the figures on your checks—it all but cuts through the paper fiber, marking it with acid-proof red ink but never making the figures less legible.

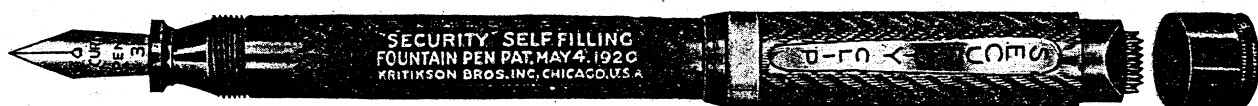

ACTUAL SIZES
(All equipped with the Check Protector)

No. 200—Long

No. 300—Long

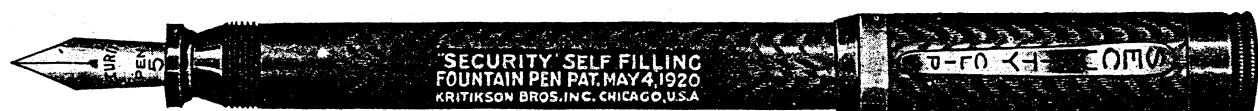

No. 300—Short

No. 400—Long

No. 500—Short

No. 500—Long

No. 600—Long

Prices of these pens are exceedingly low for the highest quality the market affords. Such prices are possible only because of standardized manufacture on five styles, because of our very large output and because we manufacture everything which goes into the pen.

No. 200	Price, \$3.00	No. 400	Price, \$4.00
No. 300	Price, 3.25	No. 500	Price, 4.50
No. 600	Price, \$5.00		

Every personal preference of business men, women and students will find satisfaction in a Security Check-Protector Fountain Pen.

We specialize on the five standard pens shown below, Numbers 200, 300, 400, 500, and 600. All of these styles are made in longs and shorts.

Each size of pen can be equipped with any of the following points:

Fine, Medium, Coarse, Medium-Stub, Broad-Stub, Stenographer, Bookkeeper, *Extra Fine, *Manifold or *Ball Point. With all you have a choice between flexible and stiff action. Use flexible if you write lightly—stiff if you write heavily. *50 cents extra.

The Security Check-Protector Fountain Pen has betterment features which no other high grade fountain pen possesses. This exclusive construction contributes such smooth, steadfast writing performance—as makes a Security a superior writing instrument. Just look at these points of excellence and you will understand the true worth of this pen:

The Writing Point. A 14k gold pen, cold rolled, unannealed, made by a secret process that gives it the temper and fine writing qualities of the best steel pen. Tipped with the highest grade iridium obtainable, it is made to last a lifetime. Ground with eight facets, rounded to a ball point that insures the smoothest writing qualities, equal to the demands of the most exacting.

The Air-Cushion Feed Bar. This puts an end forever to the curse of leaks and blots, the common fault of fountain pens. Excess flow of ink, caused by the expansion of air in the ink sack as the holder warms up in the hand, is checked and positively prevented from reaching the pen point by the syphon action of this remarkable invention.

The Screw Pressure Filler. This is a patented filling device which prevents leakage—the ink cannot be shaken out, cannot blot. Has greater ink capacity.

By a turn to the left of the button at the end of the holder, a screw action is obtained (the most powerful leverage known). It absolutely compresses the ink sack until the last particle of air is driven out, leaving a positive vacuum. This is filled when the pen is immersed in ink and the pressure released by a turn to the right. It is the simplest and the most powerful filling mechanism ever devised.

The Spring Clip with a Grip. Made of twenty-year gold plate, this clip is so designed that it slips on or off the pocket edge, without wear or tear of the clothing, by

the simple pressure of thumb and first finger of one hand. Nothing like it to be had on any other make of fountain pen. The coil spring on this clip is concealed in the cap.

Sealed Tight at Both Ends. There is no slot in the barrel to permit leakage—no possible chance of ruined clothing should the ink sack break accidentally. No unsightly lever to leave partly closed or to catch under the finger nail. No small parts to break. Nothing to mar the perfect lines and beautiful finish of this perfect writing pen.

Standardized Construction. “Security” Fountain Pens are made complete in every part in our own factory by our own stockholders, rated as the most skilful craftsmen in the fountain pen industry. Our factory is equipped with the most modern machinery and tools known to the industry.

The “Check Protector,” concealed in the top of the cap by a slip cover, can be instantly made available for perfect protection of your checks. It cuts into the fiber of the paper, driving acid-proof red ink into the cuts, thereby insuring absolute protection which defies erasure.

This patented device is so concealed that it does not in the slightest mar the beautiful lines of the pen itself.

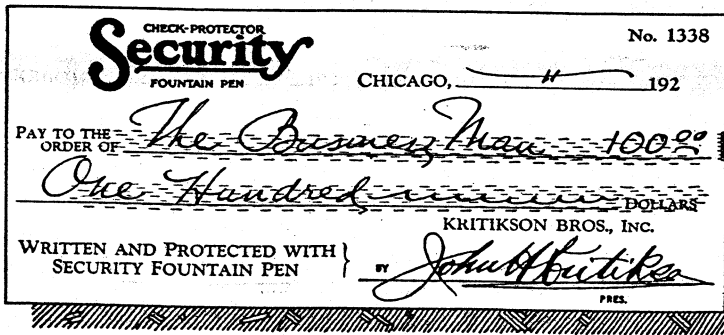

Free Repairs for Five Years. So positive is Kritikson Brothers, Inc., as to the exceptional quality of material, excellence of workmanship and stability of “Security” pens that it gives an unusual guarantee of material and workmanship for five years, in the form of a written certificate with each pen sold. What more can be asked?
